

Operations Systems Internship

Essilor AMERA (Asia-Pacific, Middle-East, Russia & Africa) is offering a systems internship at its Singapore headquarters within its Operations department.

The intern will work on various information systems for industrial operations, which cover:

- order management & routing
- production management
- data management & reporting

Basically s/he will act as the essential link between operations staff in the field on one side and IT architects and developers on the other.

More specifically, the intern will:

- define specifications and change requests through user interaction
- take part in the development of new apps on top of a next-gen low-code PaaS platform
- perform customer acceptance tests
- facilitate app deployment and end user adoption

This internship will be perfect for the IT major who wants to:

- apply IT solutions to various real-life operational issues
- be exposed to the full business applications lifecycle
- grow his/her design skills and operational skills at the same time
- discover the challenges of running a complex multi-country organization

Work culture in the team is informal and action-oriented, with room for personal initiative. Prepare yourself to be challenged and learn a lot in the process!

Requirements:

- Computer Science major or other Engineering major with a strong IT component
- Basic knowledge of web application frameworks (especially MVC architectures)
- Good communication skills, dynamism and eagerness to learn
